1. The first part of the paper is devoted to a general discussion of the problem of the existence of solutions of the system of equations (1) and (2). It is shown that the system has a solution if and only if the conditions (3) and (4) are satisfied. The conditions (3) and (4) are then shown to be equivalent to the conditions (5) and (6).

2. In the second part of the paper, the existence of solutions of the system (1) and (2) is proved for the case in which the functions  $f$  and  $g$  are continuous and the functions  $h$  and  $k$  are piecewise continuous. It is shown that the system has a solution if and only if the conditions (3) and (4) are satisfied. The conditions (3) and (4) are then shown to be equivalent to the conditions (5) and (6).

3. In the third part of the paper, the existence of solutions of the system (1) and (2) is proved for the case in which the functions  $f$  and  $g$  are continuous and the functions  $h$  and  $k$  are piecewise continuous. It is shown that the system has a solution if and only if the conditions (3) and (4) are satisfied. The conditions (3) and (4) are then shown to be equivalent to the conditions (5) and (6).

4. In the fourth part of the paper, the existence of solutions of the system (1) and (2) is proved for the case in which the functions  $f$  and  $g$  are continuous and the functions  $h$  and  $k$  are piecewise continuous. It is shown that the system has a solution if and only if the conditions (3) and (4) are satisfied. The conditions (3) and (4) are then shown to be equivalent to the conditions (5) and (6).

5. In the fifth part of the paper, the existence of solutions of the system (1) and (2) is proved for the case in which the functions  $f$  and  $g$  are continuous and the functions  $h$  and  $k$  are piecewise continuous. It is shown that the system has a solution if and only if the conditions (3) and (4) are satisfied. The conditions (3) and (4) are then shown to be equivalent to the conditions (5) and (6).
